EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science in Computer Science, Specialization in Artificial Intelligence

Expected May 2027

Courses: Machine Learning for Trading, Natural Language Processing, Computer Vision, Human-Computer Interaction

CUNY Hunter College

New York, NY

Bachelor of Arts in Computer Science

Aug 2023

Courses: Software Engineering, Web Development, Database Management, Data Structures and Algorithms

EXPERIENCE

Fetch & Fable

New York, NY

Software Engineer and Founder

May 2026 – Present

- Built and launched fetchandfable.co, a full-stack e-commerce app that turns customers' dog photos into custom illustrated printed books, automating everything from photo upload through Stripe checkout to third-party physical print fulfillment; paying customers since July 2026.
- Designed the multi-model generation pipeline: Claude writes each structured 24-page story, a vision pass extracts the dog's appearance from photos, and Gemini illustrates every page with consistent characters.
- Built the Postgres job queue behind each order: concurrent workers run several minutes of AI generation per book, retrying failed steps and resuming after crashes, with idempotent webhooks preventing double charges.
- Automated post-purchase and abandoned-cart marketing email flows in Klaviyo through custom event webhooks.

Grizz the Beagle

New York, NY

Software Engineer (Contract)

May 2025 – Present

- Automated 80%+ of customer support inquiries and cut response time from 12+ hours to under 10 seconds by building a production RAG chatbot (FastAPI, Claude API) embedded in the Shopify storefront. Used a Google Sheets knowledge base letting the non-technical founder update product info without coding.
 - Built a unified data warehouse infrastructure with nightly ETL ingesting Shopify, Meta Ads, and chatbot data, plus a Next.js analytics dashboard displaying cross-platform metrics such as blended ROAS and ROI.
-

PROJECTS

SaberGraphs: Natural Language Baseball Analytics App

[Live Demo](#) | [GitHub](#)

Tech Stack: Python, FastAPI, React, JavaScript, SQL, PostgreSQL, Claude API, Docker

- Developed a full-stack AI app that answers baseball questions with interactive charts, making advanced analytics accessible to non-technical users; queries 15,000+ player-seasons of MLB batting, pitching, and Statcast data.
- Built a data pipeline that processed 3.8M Statcast pitches into season-level PostgreSQL tables, with per-chunk data quality checks, crash-safe restarts, and 100+ automated tests.

MLB Challenge Strategy Optimization: Reinforcement Learning Research

[GitHub](#)

Tech Stack: Python, Pandas, Scikit-learn

- Built a reinforcement learning framework for MLB's 2026 ABS challenge system: a game simulator on 93,206 Statcast pitches, an RE24 reward, and a Q-Learning agent that learns when to challenge and when to hold.
 - Built an end-to-end ML pipeline extracting features from MLB Statcast data, including reward function design for challenge timing optimization and model training with Dyna-Q updates and epsilon-greedy exploration.
 - Presented the work at SABR Analytics Conference 2026.
-

TECHNICAL SKILLS

- **Programming Languages:** Python, TypeScript, JavaScript, SQL, C/C++
- **Frameworks and Libraries:** FastAPI, React, Pandas, NumPy, Matplotlib, Scikit-learn, Node.js, Chart.js, Next.js
- **Data and Infrastructure:** PostgreSQL, Google Cloud Storage, AWS S3, Docker, Git, Linux, Stripe, Shopify, Klaviyo
- **AI / ML:** RAG, LLM Integration, Supervised Learning, Reinforcement Learning, Prompt Engineering, Gemini
