EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science in Computer Science, Specialization in Artificial Intelligence

Expected May 2027

- **Coursework:** Machine Learning for Trading, Natural Language Processing, Computer Vision, Human-Computer Interaction, Computer Networks

CUNY Hunter College

New York, NY

Bachelor of Arts in Computer Science

Aug. 2023

- **Coursework:** Software Engineering, Web Development, Database Management, Data Structures and Algorithms

EXPERIENCE

Software Engineer

May 2026 – Present

Fetch & Fable

New York, NY

- Built and launched fetchandfable.co, a full-stack e-commerce app that turns customer dog photos into custom illustrated printed books, automated end to end from photo upload through Stripe checkout to third-party print fulfillment; live with paying customers since July 2026
- Developed the multi-model generation pipeline: Claude writes each 24-page story, a vision pass extracts the dog's appearance from photos, and Gemini renders all 24 illustrations with character consistency
- Designed a Postgres-backed job queue with concurrent workers to absorb viral traffic spikes from affiliate launches, running minutes of AI generation per order with retries, crash recovery, and idempotent webhooks
- Integrated custom Klaviyo event webhooks to automate abandoned-cart and post-purchase email flows, now driving 25% of attributed revenue

Software Engineer (Contract)

May 2025 – May 2026

Grizz the Beagle

New York, NY

- Automated 80% of customer support inquiries and cut response time from 8+ hours to under 10 seconds by building a production RAG chatbot (FastAPI, Claude API) embedded in the Shopify storefront
- Designed a unified data warehouse with nightly ETL ingesting Shopify, Meta Ads, and chatbot data into a Next.js dashboard reporting cross-platform metrics such as blended ROAS and ROI, replacing manual reporting

PROJECTS

SaberGraphs: Natural Language Baseball Analytics App

[Live Demo](#) | [GitHub](#)

Python, FastAPI, React, PostgreSQL, Claude API, Docker

- Developed a full-stack AI app that answers baseball questions with interactive charts, making advanced analytics accessible to non-technical users; queries 15,000+ player-seasons of MLB batting, pitching, and Statcast data
- Built a data pipeline that processed 3.8M Statcast pitches into season-level PostgreSQL tables, with per-chunk data quality checks, crash-safe restarts, and 100+ automated tests

MLB ABS Challenge: Reinforcement Learning Research

[GitHub](#)

Python, Pandas, Scikit-learn

Presented at SABR Analytics Conference 2026

- Modeled MLB's 2026 ABS challenge system as a reinforcement learning problem: a game simulator over 93,206 Statcast pitches, an RE24 reward, and a Q-Learning agent that learns when to challenge and when to hold
- Trained the agent with Dyna-Q updates and epsilon-greedy exploration on features engineered from raw Statcast data, including pitch location, count, and game state

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C/C++

Frameworks and Libraries: FastAPI, React, Next.js, Node.js, Pandas, NumPy, Scikit-learn, Matplotlib, Chart.js

Data and Infrastructure: PostgreSQL, Docker, Git, Linux, AWS S3, Google Cloud Storage, Stripe, Shopify, Klaviyo

AI / ML: RAG, LLM Integration, Supervised Learning, Reinforcement Learning
